One Network Enterprises™

ERP Reimagined for Global Defense

A new look at improving global defense capabilities with an ERP solution designed, deployed, and proven in Defense operations

Enterprise Resource Planning (ERP) implementations in worldwide Defense Organizations have not achieved the level of success as in commercial markets. Bottom line: they are expensive, inflexible, and not organically built to deliver and support many critical Defense operations. These shortcomings (reflected by their lack of focus in Defense) have penalized international Defense organizations, including the US. It has resulted in companies deploying legacy solutions that have become obsolete, expensive to maintain, cannot be modernized and cannot support emerging critical military functions such as joint operations.

NEO for Global Defense is the only commercial enterprise solution that is designed for Global Defense operations.

It includes a commercial set of Defense related modules that are focused on providing critical Defense capabilities that are organically integrated with transformational commercial capabilities and delivered and supported as an integrated solution.

Through One Network's **"Never Legacy" commitment**, the fully configured (deployed) solution is supported as COTS, guarantees that the implementation will never go legacy and is kept current and up to date. Customers take

modernizations as they choose. And customers can have it their way as compared to traditional ERPs that force an "out of the box" solution that takes time and heavy costs to customize and sustain.

NEO for Global Defense enables a **Defense ecosystem that benefits all Defense organizations**. It natively supports key Defense capabilities such as management of munitions and guided weapons, food service, bulk fuels, medical supplies, and sparing across supply, transportation and maintenance functions, all on a single platform. It supports local languages. Defense customers get a direct say in prioritizing ONE's Defense Roadmap. Commercial modernizations are always available. The solution is interoperable with US Defense solutions and NATO operations.

It is the only enterprise solution that **supports true disconnected, denied, intermittent and/or with limited bandwidth (D-DIL) operations**, ashore and afloat, further enhancing forward operations that must operate in a disconnected, contested or austere environment.

The NEO for Global Defense **eases the integration with legacy environments**, ensuring that no existing system is siloed and no IT investment is wasted while modernizing for readiness.

One Network Enterprises™

Defense-focused solution that provides a complete Defense ecosystem of knowledge and capabilities to rapidly improve your mission success.

Native support of Defense master data is accomplished through a Distributed Master Data Management (MDM) capability. A publish and subscribe model, data cleansing, and migration tools reduce the headaches and costs associated with enterprise implementations.

A multi-tier **Defense Control Tower with full end-to-end visibility** and business process orchestration for both owned and shared assets across the deployed Defense network further enhances planning, execution and collaboration opportunities with mission partners. This marriage provides a highly flexible and responsive platform that enhances agility. And it ensures that the organization remains highly flexible and adaptive to change.

The ONE integration approach extends to any ERP or enterprise solution you may already have in place. We can extend your existing ERP with our modernized platform, allowing new capabilities to be fielded quickly. Solutions such as munitions/explosive ordnance, D-DIL operations, and other defense-specific capabilities can be onboarded with ease.

The solution provides various **financial accounting and audit compliance capabilities** that are integrated with supply chain and logistics operational transactions. This streamlines the financial booking, checkbook maintenance and ensures auditability and regulatory compliance. Deployed solutions have achieved the highest audit results.

Fine-grained embedded **permissibility framework provides both RBAC and ABAC support** with configurable Segregation of Duties while managing personal skills and certifications. Through federation, users can only perform or only see what they are allowed.

NEO for Global Defense is **secure, supporting both cloud, intranet and private instance implementations**, supporting both unclassified and classified operations.

Why rely on the status quo and traditional solutions that have proven to be costly, inflexible, slow to deliver and not Defense focused? Eliminate the high acquisition and support costs and consider a flexible Defense-focused solution that brings along a complete Defense ecosystem of knowledge and capabilities to rapidly improve your mission success.

The software that is the subject of this documentation is subject to control of the EAR and/or ITAR.
